Basic Evaluation Method

1. Install and Setup

- Follow your README instructions to load the extension in Chrome.
- Make sure the extension icon appears in the Chrome toolbar.

2. Functionality Test

- Go to any website.
- Select (highlight) some text.
- Right-click and check if the context menu shows translation options (e.g., "Translate to Hindi").
- Click one of the translation options.
- Confirm that the translated text appears (as a popup, notification, or however your extension is designed).

3. Language Coverage

- Repeat the above steps for each supported language (German, Kannada, Hindi, Malayalam, Tamil).
- Check that each language option works and returns a translation.

4. Error Handling

- Try right-clicking without selecting any text. The translation options should not appear, or nothing should happen if clicked.
- Disconnect your internet and try translating. The extension should handle the error gracefully (no crash or confusing error).

5. User Experience

- Ensure the extension does not slow down the browser.
- The translation result should be clear and easy to find.

Checklist Table Example

Test Case	Expected Result	Pass/Fail
Extension loads in Chrome	Icon appears	✅
Context menu on text selection	Translation options appear	✅
Translate to Hindi	Correct translation shown	✅
Translate to Tamil	Correct translation shown	✅
No text selected	No error, nothing happens	✅
Offline translation	Graceful error, no crash	✅
